

# Contents

<b>1. Discovery of the Quantum Hall Effect</b> .....	1
1.1 Realization of Two-Dimensional Electron Systems .....	1
1.1.1 Si MOS Systems and GaAs–AlGaAs Heterojunctions .	1
1.1.2 Surface of Liquid Helium .....	6
1.2 The Quantum Hall Effect .....	7
1.2.1 Diagonal and Hall Resistances .....	7
1.2.2 The Discovery of the Integer Quantum Hall Effect ....	9
1.2.3 Discovery of the Fractional Quantum Hall Effect ....	14
Exercises .....	14
<b>2. Two-Dimensional Electrons in a Magnetic Field</b> .....	17
2.1 Electron Motion in Classical Mechanics .....	17
2.1.1 Motion in a Magnetic Field .....	17
2.1.2 Motion in the Presence of a Magnetic Field and an Electric Field .....	19
2.2 Motion of an Electron in Quantum Mechanics .....	20
2.2.1 Hamiltonian for a Free Electron .....	20
2.2.2 Momentum and Angular Momentum .....	20
2.2.3 Gauge Invariance .....	21
2.2.4 Landau Levels .....	22
2.2.5 Quantization Condition and Aharonov–Bohm Phase ..	25
2.2.6 Abrikosov Lattice .....	27
2.3 Electrons in External Fields .....	28
2.3.1 Motion in a Uniform Electric Field .....	28
2.3.2 Motion at the Edge of the System .....	30
2.4 Localization by Impurities .....	31
2.4.1 Anderson Localization at $B = 0$ .....	31
2.4.2 Localization in a Strong Magnetic Field .....	33
Exercises .....	35
<b>3. The Integer Quantum Hall Effect</b> .....	37
3.1 Laughlin’s Gedankenexperiment .....	37
3.2 Büttiker’s Theory .....	41
3.2.1 Nonequilibrium Occupation of the Edge States .....	42

3.2.2	Fermi Level and Current . . . . .	43
3.2.3	Behavior of Current at the Electrodes . . . . .	45
3.3	Edge Current vs. Bulk Current . . . . .	47
3.4	Deviations from the Quantized Value . . . . .	49
3.4.1	Effect of Temperature . . . . .	49
3.4.2	Breakdown due to Large Current . . . . .	50
<b>4.</b>	<b>The Fractional Quantum Hall Effect . . . . .</b>	<b>53</b>
4.1	General Considerations . . . . .	53
4.1.1	Impurity Potential and Electron–Electron Interaction . . . . .	53
4.1.2	Limit of Strong Magnetic Field . . . . .	55
4.1.3	Electron–Hole Symmetry . . . . .	55
4.1.4	Definition of the Problem . . . . .	57
4.1.5	Possibility of a Wigner Crystal . . . . .	57
4.2	Investigation by the Exact-Diagonalization Method . . . . .	59
4.2.1	Representation of the Hamiltonian in a Matrix Form . . . . .	59
4.2.2	Ground State . . . . .	62
4.2.3	Excitation Spectrum . . . . .	64
4.3	Investigation by the Variational Method . . . . .	64
4.3.1	Laughlin’s Wave Function . . . . .	65
4.3.2	The Filling Factor of the Landau Level . . . . .	66
4.3.3	Zero Points . . . . .	69
4.3.4	Exact Hamiltonian . . . . .	70
4.4	Comparison Between the Exact Ground State and the Laughlin State . . . . .	72
4.4.1	Comparison of the Wave Functions . . . . .	72
4.4.2	Comparison of the Interactions . . . . .	72
4.5	Properties of the FQHE State . . . . .	74
4.5.1	Quasiparticles . . . . .	74
4.5.2	Collective Excitations . . . . .	76
4.5.3	Hierarchy . . . . .	82
4.6	Comparison with Experiment . . . . .	85
4.6.1	Fractional Quantization . . . . .	85
4.6.2	Excitation Energy . . . . .	86
4.7	Order Parameter and Long-Range Order . . . . .	90
4.7.1	Off-Diagonal Long-Range Order . . . . .	90
4.7.2	Order in the Fractional Quantum Hall Effect . . . . .	91
	Exercises . . . . .	93
<b>5.</b>	<b>Composite-Particle Mean-Field Theory . . . . .</b>	<b>95</b>
5.1	Berry Phase and Statistics of Quasiparticles . . . . .	95
5.1.1	Berry Phase . . . . .	95
5.1.2	Anyons . . . . .	98
5.1.3	Statistics of the Quasiparticles . . . . .	100
5.1.4	Hierarchy Theory in Terms of Anyons . . . . .	101

5.2	Composite-Boson Mean-Field Theory . . . . .	103
5.3	Chern–Simons Ginzburg–Landau Theory . . . . .	105
5.3.1	Ginzburg–Landau Equation . . . . .	105
5.3.2	Mean-Field Solution . . . . .	107
5.3.3	Properties of the Uniform Solution . . . . .	108
5.4	Composite-Fermion Mean-Field Theory . . . . .	112
	Exercises . . . . .	115
<b>6.</b>	<b>Spin and Pseudospin Freedom . . . . .</b>	<b>117</b>
6.1	The Ground State in the Presence of Spin Degeneracy . . . . .	117
6.1.1	Halperin’s Trial Wave Function . . . . .	118
6.1.2	Ferromagnetic State . . . . .	119
6.1.3	Spin Singlet State . . . . .	119
6.2	Excited States . . . . .	123
6.2.1	Spin Waves . . . . .	123
6.2.2	Quasiparticles . . . . .	124
6.3	Skyrmions . . . . .	125
6.3.1	Small Skyrmions . . . . .	126
6.3.2	Large Skyrmions . . . . .	127
6.3.3	Experimental Evidence for Skyrmions . . . . .	129
6.3.4	Comparison with the Hubbard Model . . . . .	130
6.4	Bilayer Systems and Pseudospin Representation . . . . .	131
6.4.1	Parameters Which Specify the Bilayer . . . . .	131
6.4.2	Pseudospin Representation of a Bilayer System . . . . .	132
6.5	Ground State of a Bilayer System . . . . .	133
6.5.1	The Case $d > 0$ and $\Delta_{\text{SAS}} = 0$ . . . . .	133
6.5.2	The case $d > 0$ and $\Delta_{\text{SAS}} > 0$ . . . . .	136
	Exercise . . . . .	138
<b>7.</b>	<b>Even-Denominator States . . . . .</b>	<b>139</b>
7.1	Anomalous Phenomena at $\nu = 1/2$ . . . . .	139
7.1.1	Anomaly in $\rho_{xx}$ . . . . .	139
7.1.2	Anomaly in Surface Acoustic Waves . . . . .	140
7.2	Composite-Fermion Theory . . . . .	142
7.3	Experimental Verification . . . . .	143
7.3.1	Measurement of the Fermi Wave Number . . . . .	143
7.3.2	Effective Mass . . . . .	147
7.4	A Remaining Problem: the Essence of the State at $\nu = 1/2$ . . . . .	149
<b>8.</b>	<b>Electron States at the Sample Edge . . . . .</b>	<b>151</b>
8.1	Edge States	
	– Effect of the Long-Range Coulomb Interaction . . . . .	151
8.1.1	Steep Confining Potential . . . . .	151
8.1.2	Slowly Varying Confining Potential . . . . .	153
8.2	Idealized Edge States – the Effect of Electron Correlation . . . . .	155

8.2.1	Tomonaga–Luttinger Liquid . . . . .	155
8.2.2	Chiral Tomonaga–Luttinger Liquid . . . . .	161
8.2.3	Experimental Confirmation . . . . .	170
	Exercises . . . . .	171
<b>9.</b>	<b>Higher Landau Levels . . . . .</b>	<b>173</b>
9.1	New Ground States in Higher Landau Levels . . . . .	173
9.1.1	The Second Lowest Landau Level . . . . .	173
9.1.2	The Third Lowest and Higher Landau Levels . . . . .	175
9.2	The Hamiltonian in Higher Landau Levels . . . . .	176
9.3	Pair States . . . . .	178
9.3.1	New Ingredients: Spin Degree of Freedom and Pairing .	178
9.3.2	Spin Singlet Pair State . . . . .	179
9.3.3	Pairing of Spin-Polarized Fermions . . . . .	180
9.3.4	Ground State at $\nu = 5/2$ . . . . .	181
9.4	Charge Density Wave States . . . . .	182
9.4.1	Mean-Field Theory of the CDW States . . . . .	182
9.4.2	Exact-Diagonalization and DMRG Studies of the CDW States . . . . .	186
	Exercises . . . . .	188
	<b>Answers to Exercises . . . . .</b>	<b>189</b>
	<b>References . . . . .</b>	<b>201</b>
